Ke Chen

Matrix Preconditioning Techniques and Applications (Cambridge Monographs on Applied and Computational Mathematics) Ke Chen

Preconditioning techniques have emerged as an essential part of successful and efficient iterative solutions of matrices. Ke Chen's book offers a comprehensive introduction to these methods. A vast range of explicit and implicit sparse preconditioners are covered, including the conjugate gradient, multi-level and fast multi-pole methods, matrix and operator splitting, fast Fourier and wavelet transforms, incomplete LU and domain decomposition, Schur complements and approximate inverses. In addition, aspects of parallel realization using the MPI are discussed. Very much a users-guide, the book provides insight to the use of these techniques in areas such as acoustic wave scattering, image restoration and bifurcation problems in electrical power stations. Supporting MATLAB files are available from the Web to support and develop readers' understanding, and provide stimulus for further study. Pitched at graduate level, the book is intended to serve as a useful guide and reference for students, computational practitioners, engineers and researchers alike.

From reader reviews:

Douglas Barney:

Have you spare time for just a day? What do you do when you have far more or little spare time? Yep, you can choose the suitable activity for spend your time. Any person spent their spare time to take a walk, shopping, or went to often the Mall. How about open or maybe read a book entitled Matrix Preconditioning Techniques and Applications (Cambridge Monographs on Applied and Computational Mathematics)? Maybe it is for being best activity for you. You already know beside you can spend your time along with your favorite's book, you can better than before. Do you agree with their opinion or you have other opinion?

Timothy Holeman:

The guide with title Matrix Preconditioning Techniques and Applications (Cambridge Monographs on Applied and Computational Mathematics) has a lot of information that you can study it. You can get a lot of profit after read this book. This book exist new knowledge the information that exist in this publication represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This book will bring you throughout new era of the syndication. You can read the e-book with your smart phone, so you can read the item anywhere you want.

Tia Rosario:

Reading a book being new life style in this season; every people loves to go through a book. When you read a book you can get a great deal of benefit. When you read textbooks, you can improve your knowledge, simply because book has a lot of information on it. The information that you will get depend on what sorts of book that you have read. If you wish to get information about your study, you can read education books, but if you want to entertain yourself you are able to a fiction books, this sort of us novel, comics, in addition to soon. The Matrix Preconditioning Techniques and Applications (Cambridge Monographs on Applied and Computational Mathematics) will give you a new experience in reading through a book.

Lee Villegas:

In this era globalization it is important to someone to obtain information. The information will make a professional understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, paper, book, and soon. You can see that now, a lot of publisher in which print many kinds of book. The book that recommended for you is Matrix Preconditioning Techniques and Applications (Cambridge Monographs on Applied and Computational Mathematics) this publication consist a lot of the information from the condition of this world now. This specific book was represented how does the world has grown up. The dialect styles that writer require to explain it is easy to understand. Often the writer made some analysis when he makes this book. This is why this book suitable all of you.
