Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2)

Ramon F. Hanssen

Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2) Ramon F. Hanssen

This book is the product of five and a half years of research dedicated to the understanding of radar interferometry, a relatively new space-geodetic technique for measuring the earth's topography and its deformation. The main reason for undertaking this work, early 1995, was the fact that this technique proved to be extremely useful for wide-scale, fine-resolution deformation measurements. Especially the interferometric products from the ERS-1 satellite provided beautiful first results—several interferometric images appeared as highlights on the cover of journals such as *Nature* and *Science*. Accuracies of a few millimeters in the radar line of sight were claimed in semi-continuous image data acquired globally, irrespective of cloud cover or solar illumination. Unfortunately, because of the relative lack of supportive observations at these resolutions and accuracies, validation of the precision and reliability of the results remained an issue of concern. From a geodetic point of view, several survey techniques are commonly available to measure a specific geophysical phenomenon. To make an optimal choice between these techniques it is important to have a uniform and quantitative approach for describing the errors and how these errors propagate to the estimated parameters. In this context, the research described in this book was initiated. It describes issues involved with different types of errors, induced by the sensor, the data processing, satellite positioning accuracy, atmospheric propagation, and scattering characteristics. Nevertheless, as the first item in the subtitle “Data Interpretation and Error Analysis” suggests, data interpretation is not always straightforward.

From reader reviews:

Eliseo Watkins:

Hey guys, do you desire to find a new book to read? Maybe the book with the title Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2) is suitable to you? The particular book was written by a well-known writer in this era. Typically the book titled Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2) is one of several books that everyone reads now. This particular book has inspired a number of people in the world. When you read this review you will enter the new shape that you never know ahead of. The author explained their strategy in a simple way, and so all of people can easily recognize the core of this e-book. This book will give you a lot of information about this world now. To help you to see the represented of the world in this particular book.

Laura Grier:

Reading a book can be one of a lot of activity that everyone in the world enjoys. Do you like reading books thus. There are a lot of reasons why people love it. First reading a review will give you a lot of new details. When you read a guide you will get new information due to the fact book is one of a number of ways to share the information or maybe their idea. Second, studying a book will make anyone more imaginative. When you reading a book especially hype book the author will bring you to imagine the story how the people do it anything. Third, you are able to share your knowledge to other folks. When you read this Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2), you can tell your family, friends and also soon about your guide. Your knowledge can inspire different ones, make them reading a guide.

James Fox:

That book can make you to feel relax. This specific book Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2) was multi-colored and of course has pictures on the website. As we know that book Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2) has many kinds or style. Start from kids until young adults. For example Naruto or Investigator Conan you can read and think you are the character on there. So, not at all of book are usually make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book to suit your needs and try to like reading which.

Belinda Bridges:

A lot of book has printed but it is different. You can get it by online on social media. You can choose the best book for you, science, comedian, novel, or whatever by simply searching from it. It is identified as of book Radar Interferometry: Data Interpretation and Error Analysis (Remote Sensing and Digital Image Processing) (v. 2). You can add your knowledge by it. Without leaving behind the printed book, it can add

your knowledge and make an individual happier to read. It is most essential that, you must aware about reserve. It can bring you from one destination for a other place.
